

Highly durable multipole connectors
with a long service life
for hermetic and non-hermetic applications

SR

models

SR / SSR / SRG / SSRG / SRT / ZWN

The **SR series** of multipole connectors are renowned for their high durability and long service life; they are designed for a wide range of applications.

Originally developed for **military use**, they are now also used in **aviation, railway and transportation technology, automation and telecommunications, signalling-related applications, heavy industrial equipment** and other applications requiring a **reliable connection during vibrations, shocks and acceleration**.

SR series connectors form an extensive product range.

ZWN multipole connectors are used for connecting and disconnecting electrical circuits in high-voltage circuit breakers and high-voltage switches.

Due to the similarity of both series, the ZWN connectors are covered in the SR series section (they are only available in Ø 60 mm).

TENEON connectors are used to interconnect mission-critical generators, devices and control units in suburban and long-distance trains – **brakes, doors**, etc.

TENEON connectors are used in armoured and steel-plated vehicles.

The circular multipole connector is designed to quickly and reliably connect and disconnect electrical circuits in electric, radio and electronic devices.

SRG and SSRG series hermetic connectors are designed for applications that require the whole unit or device to be hermetic.

A connector consists of a receptacle with a union nut for manual connection and a flange for mounting to the wall of an electrical device. Plugs are available in straight and angled, shielded and unshielded configurations. Receptacles are available in cable mount and panel mount configurations (SR and SRG series), both shielded and unshielded. Depending on the connection type, male and female plugs are available, as well as male and female receptacles. SR and SRG connectors are available with screw joints of Ø 16–60 mm (SRG series up to 55 mm); SSR and SSRG connectors Ø 20–48 mm (SSRG series up to 40 mm). All connectors such as SR are also available in the SRT configuration, meaning they are capable of operating in higher temperatures of up to +100°C.

SR AND SSR PLUG HOUSING CONFIGURATIONS		SR, SRG, SSR AND SSRG RECEPTACLE HOUSING CONFIGURATIONS	
KPES	straight shielded female plug	BPES	cable mount shielded male receptacle
KPEG	straight shielded male plug	BPEG	cable mount shielded female receptacle
KPNS	straight unshielded female plug	BPNS	cable mount unshielded male receptacle
KPNG	straight unshielded male plug	BPNG	cable mount unshielded female receptacle
KUES	angled [90°] shielded female plug		
KUEG	angled [90°] shielded male plug

KUNG	angled [90°] unshielded male plug		

The above markings are consistent with common conventions for creating connector marking codes.

MAIN TECHNICAL DATA

Rated maximum voltage 600 V DC or AC with maximum frequency of 3 000 Hz.

Rated current and maximum contact resistance of a contact pair (pin, socket) inside connector:

Contact diameter [mm]	Contact resistance of a contact pair [mΩ]	Rated current I _n for contacts [A]
Ø 1.5	≤ 2.5	10
Ø 2.5	≤ 1	25
Ø 3.5	≤ 0.5	50
Ø 5.5	≤ 0.2	100
Ø 9	≤ 0.15	200

Total resistance of all contacts and connection transition of connector housing does not exceed 2 mΩ.

The permissible rated current I_n should only be applied for application connectors for intermittent or occasional load and for connections with fewer than 20 contacts (10 contacts for SSR). If current load is applied to all pins for prolonged periods, the principle of total current load should be used:

Number of contacts	SR	SSR
1–10	100 %	100 %
10–20	100 %	90 %
21–30	80 %	80 %
31–47	70 %	–

Pinouts and connection numbering are described in the following tables.

Insulation resistance between adjacent contacts and between the contacts and the housing is at least:

- 1 000 MΩ – under normal climatic conditions
- 20 MΩ – environments with a relative humidity of 96 to 98% at a temperature of 20°C and a pressure of 100 kPa

Dielectric strength under normal conditions for 1 minute is 2 100 V, 50 Hz for plugs and receptacles;

1 800 V, 50 Hz for SR16...2...5, SRG20...5...10, SRG20...5...7 and SRG 40...3...9 plugs and receptacles.

The connectors can reliably operate under the following conditions:

- Ambient air temperature -60°C to +60°C.
- Ambient relative humidity up to 98% at +20°C.
- SRT model – reliable operation up to +100°C.
- Stable during vibrations with a frequency of 5 Hz to 2 000 Hz; acceleration up to 30 g.
- Impact strength – individual impacts at an acceleration of up to 500 g
- Impact strength – repeated impacts at an acceleration of up to 35 g
- At constant [centrifugal] acceleration of up to 150 g

NOTES FOR USE

Wires should be connected to connector pins by soldering. It is recommended that the contact ends be insulated.

The individual cables or unshielded cable ends are secured using clamps when installing an unshielded cable harness. Secured cables should not hinder free movement [clearance] of pins in the insulator.

Installation – to improve the connector's hermetic properties, it is recommended that the space inside the connector is filled with a sealant [polyurethanes, epoxies].

The connector's panel section can be mounted on the inner or outer wall of the product [device].

Clamping should be done using the flange on the connector housing or using screws or rivets.

Hermetic connectors should be mounted onto the device using rubber pads.

When operating a connector, nuts and working parts of the mounting section should be covered with grease [petroleum jelly].

Connector nuts should be secured with a wire to prevent loosening. For this purpose, there are 1 mm diameter holes in the connector housing.

A slightly darker silvery film may appear on the connector contacts during storage [oxidation].

MORE INFORMATION

A connector consists of a plug and a panel mount or cable mount receptacle. The plug and receptacle are of the same electrical type [they form a connection] if they are of the same model and have the same housing diameter, same number of pins and same pinout configuration, e.g. SR28... 4.G5. SR receptacles match SR plugs [both cable mount and panel mount] or SRG hermetic plugs. SSR receptacles only fit SSR plugs or SSRG hermetic plugs.

SR, SSR SRG and SSRG connectors meet the WT/A-15/018-68 requirements [technical data].

Warranty: Warranty period: 8.5 years for the permitted number of connections and disconnections of plug from receptacle, 500 connections maximum. Permissible number of hours – 1 000.

NB

In the product listings, non-SR series products [redacted] have a Code column highlighted in grey.

SRT Multipole Connectors

The SRT circular multipole connector is designed to quickly and reliably connect and disconnect electrical circuits in electric, radio and electronic devices operating in high temperatures.

The connector consists of a receptacle with a union nut for manual connection and a flange for mounting onto the side of an electrical device. Plugs are available in straight and angled, shielded and unshielded configurations. Receptacles are available in cable mount and panel mount configurations (SR and SRG series), both shielded and unshielded. Depending on the connection type, male and female plugs are available, as well as male and female receptacles. The SRT connectors are available with a screw joint of Ø 20, 32, 36, 48 and 55 mm. All connectors such as SR are also available in the SRT configuration meaning they are capable of operating in higher temperatures of up to +100°C.

SRT PLUG HOUSING CONFIGURATIONS		SRT RECEPTACLE HOUSING CONFIGURATIONS	
KPES	straight shielded female plug	BPES	cable mount shielded male receptacle
KPEG	straight shielded male plug	BPEG	cable mount shielded female receptacle
KPNS	straight unshielded female plug	BPNS	cable mount unshielded male receptacle
KPNG	straight unshielded male plug	BPNG	cable mount unshielded female receptacle
KUES	angled [90°] shielded female plug		
KUEG	angled [90°] shielded male plug		
KUNS	angled [90°] unshielded female plug		
KUNG	angled [90°] unshielded male plug		

The above markings are consistent with common conventions for creating marking codes for connectors.

MAIN TECHNICAL DATA

Rated maximum voltage 500 V DC or AC peak value with maximum frequency 3 000 Hz.

Maximum current and maximum contact resistance of contact pair (pin, socket):

Contact diameter [mm]	Contact resistance of contact pair [mΩ]	Rated current I_n for contacts [A]
Ø 1.5	≤ 2.5	10
Ø 2.5	≤ 1	25
Ø 3.5	≤ 0.75	50
Ø 5.5	≤ 0.3	100

Total contact resistance of all parts of the assembled connector does not exceed 2 mΩ.

The permissible rated current I_n should only be applied for intermittent or occasional applications. For prolonged uninterrupted use of all contacts, the maximum permissible current value depends on the number of connector pins:

Contact diameter [mm]	Base current load for one link [A] dependent on the number of connector contacts		
	1-20 contacts	21-30 contacts	More than 31 contacts
1.5	10	9	8
2.5	25	22	20
3.5	50	45	40
5.5	100	90	80

Insulation resistance between adjacent contacts and between the contacts and the housing is at least:

- 1 000 MΩ – under normal conditions
- 20 MΩ – at higher humidity of 98% at +20°C and a pressure of 100 kPa
- 20 MΩ – at higher temperature of +150°C

Dielectric strength under normal climatic conditions at thickness of 1 mm is 1 500 V at frequency 50 Hz

The connectors can reliably operate under the following conditions:

- Ambient air temperature -60°C to +100°C
- Ambient air relative humidity up to 98% at +20°C
- Vibration frequency 10–200 Hz, acceleration up to 10 g with amplitude up to 2.5 mm
- Impacts with an acceleration of up to 7 g with a frequency of 40–100 impacts per minute
- Constant centrifugal acceleration up to 25 g

NOTES FOR USE

Wires should be connected to the connector terminals by soldering.

We recommend insulating contact ends with insulating sleeves (polyvinyl chloride, etc.).

- During installation, unshielded cables, wires or the unshielded end of the cable should be secured using clamps. Secured wires should have clearance of the pins in the insulator.
- If better airtightness is desired, it is recommended that the installation space of the connector is filled with a hermetic seal.

The panel section of the connector can be mounted onto the inner or outer side of a device. The connector can be mounted onto the device using a flange which is then secured with screws or rivets. The appropriate installation method should be chosen depending on the wall thickness at the place of installation.

The coupling nut joint and working parts of the receptacle housing should be covered with petroleum jelly.

A wire can be used to prevent the connector nut from loosening. For this purpose, there are 1 mm diameter holes in the connector housing.

The silver coating of the connector contacts may darken (oxidation) during storage.

MORE INFORMATION

The connector consists of a straight or angled [90°] plug with a panel mount or cable mount receptacle.

The receptacle and plug are of the same electrical type (they form a connector) if they are of the same model, and have the same housing diameter, number, pinout data and contact type, e.g. SRT32...12G1.

SRT connectors meet the WT/A-15/026-69 requirements.

The warranty period is 8.5 years for the permitted number of connections – no more than 500 disconnections of plug and receptacle without electrical load. Allowable operating hours – 700 hours.

EXAMPLE OF ORDERING A CONNECTOR

[Plug and receptacle are ordered individually]

Straight plug SRT20KPN2G6U2

+

Receptacle STR20B2S6U2

ZWN Series Connectors

ZWN multipole high-voltage connector plugs are designed for connecting and disconnecting controlling electrical circuits in high-voltage internal switches and in high-voltage switchgears. They can also be used in other applications, especially those with higher dielectric strength requirements and larger insulation distances between individual contacts and between the housing and contacts.

ZWN connector housing has a diameter of 60 mm.

The connector consists of a plug with a union nut for manual receptacle connection and a receptacle with a flange for mounting onto the wall of an electrical device. Plugs are available in the straight unshielded configuration with a nut. Receptacles are available in panel mount and cable mount configurations, and unshielded with a nut. Depending on the plug connector type, male and female plugs are available, as well as male and female receptacles.

ZWN connectors are available in 20-pin Ø 1.5 mm and Ø 2.5 mm configurations

[male and female] with a Ø 3 mm ground contact. The ground contact is connected to the receptacle or plug housing [metal] by a retaining ring. The ground pin is bigger than the other pins.

MODELS AND CONFIGURATIONS OF ZWN RECEPTACLES

ZWN60B20S – panel mount male receptacle
 ZWN60B20G – panel mount female receptacle
 ZWN60BPN20S – cable mount male receptacle
 ZWN60BPN20G – cable mount female receptacle

MODELS AND CONFIGURATIONS OF ZWN PLUGS

ZWN60KPN20S – straight male plug
 ZWN60KPN20G – straight female plug

MAIN TECHNICAL DATA

Rated voltage 380 V

Rated current and maximum contact resistance of a contact pair [pin-socket] inside connector:

Contact diameter [mm]	Contact resistance of contact pair [mΩ]	Rated current I_n for contacts [A]
Ø 1.5	≤ 2.5	10
Ø 2.5	≤ 1	25
Ø 3	≤ 0.75	-

Total contact resistance of all contacts of the assembled connector housing does not exceed 2 mΩ.

Insulation resistance:

- 1 000 MΩ – under normal conditions
- 10 MΩ – environments with a higher humidity of 95 to 98% at a temperature of +20°C and a pressure of 100 kPa
- 50 MΩ – at an ambient temperature of +60°C

Dielectric strength 2 500 V / 50 Hz for 1 minute; normal climatic conditions.

The connectors can reliably operate under the following conditions:

- Ambient air temperature -60°C to +100°C
- Humidity up to 98% at +20°C
- Stability during vibrations of 5 to 2 000 Hz at an acceleration of 30 g
- Individual impacts at an acceleration of up to 500 g
- Constant centrifugal acceleration of up to 150 g

MORE INFORMATION

ZWN60-20-1 matches the pinout "1"

ZWN connectors can be ordered with a different number of 1.5 mm and 2.5 mm diameter pins to the ones described in the product matrix. This modification must correspond to the allowed number of pins (last digit in the connector's code).

OPERATING NOTES

Cables should be connected to the terminals by soldering. It is recommended that contact ends are insulated (e.g. with PVC).

Unshielded cable mount plugs and receptacles are equipped with a rubber washer that provides extra protection (against short circuits) between the pins inside the connector.

Panel mount receptacles can be mounted onto the sides (sections) of a device from the outside or inside.

When the connector is in operation, petroleum jelly should be applied to the union nut and working parts of the receptacle housing.

The silver pin plating may darken (oxidation) during storage of the connector.

MORE INFORMATION

Connectors meet the criteria of standards PN-71/E-06150, PN-73/E-06165, ICE issue 56-4 and the requirements of WT-85/MPM-13-35115.

The warranty period is 4 years for the permitted number of connections – no more than 500 disconnections of plug and receptacle without electrical load.

EXAMPLE OF A CONNECTOR ORDER
